

BIG NEWS!!

Responding well to reviewer comments is important. You can't get your paper published without doing that. In addition, it's important to write a strong paper to minimize the number of comments you do get and make it easier to get accepted.

To help you do exactly that, we wrote a book on how to write a strong academic paper "How To Write An Academic Paper 101" (<https://phdvoice.org/product/writing-an-academic-paper-101/>)!

It covers all the basics to writing a strong academic paper including:

- Writing the abstract, introduction, method, results, discussion, conclusion, references, and title
- How to plan your paper from the very start
- Picking the right journal
- How to best respond to reviewer comments
- How to work with co-authors
- How to write your paper to maximize the citations you'll get
- And More!

Most find writing academic papers hard, but it doesn't have to be.
In fact, they're actually very easy once you know how to do it.

Give it to your PhD students to help them write their papers!
